Company Leadership

Alexey Dashkevich, CEO and Solution architect

Alexey has got Masters Degree in Computer Science (Belarusian State University, 2004) and 10-years experience in the software industry. Alexey worked within diverse industries (Product Information and Catalog Management, Postal mailing optimization, Resort and Hotel management, Resource management, Document management). He has advanced skills with leading-edge programming tools complemented by proven ability to assimilate and rapidly utilize emerging technologies, solid mathematics knowledge with experience developing comprehensive algorithms.

Services

Custom software development

We comply with the latest development and technology standards, apply cutting edge software engineering methodologies and integration procedures adjusted to every specific case.

Website design, optimization and promotion

We are ready to create website to meet all the needs and ideas of our customers. The websites, created by our company, are SEO-friendly and certainly targeting the required market.

Software customer support

We offer customer support services, provide help desk support to the customers, define update strategies and bug fixes delivery.

Areas of Expertise

Products

Originally our company was founded to develop Property Management System for Resorts, Hotels and Recreation Centers, and also Hotel Reservation Software for local (Belorussian) market. It took us less than 2 year to develop the product and now it is successfully and effectively used by more than 10 customers. Now we continue work on this project and do customers care. Our product is developed in Java with the Swing user interface. For the project we used:

- *Sugar – as customer care tool*
- *Agile, JIRA, Confluence – as project management tools*
- *Maven, CruiseControl, Spring – as build and customer customization tools*
- *Eclipse, iReport – as development platform*
- *Java, Swing, Jgoodies, Hibernate, JasperReports, Velocity, junit, MySQL*

Experience

We've got wide experience in Desktop Java, because we applied it when developing our own product. Apart from developing our original product we were involved into some outsourcing projects for local customers, for example, we've developed the most popular in our country travel web portal – <http://sanatorii.by>.

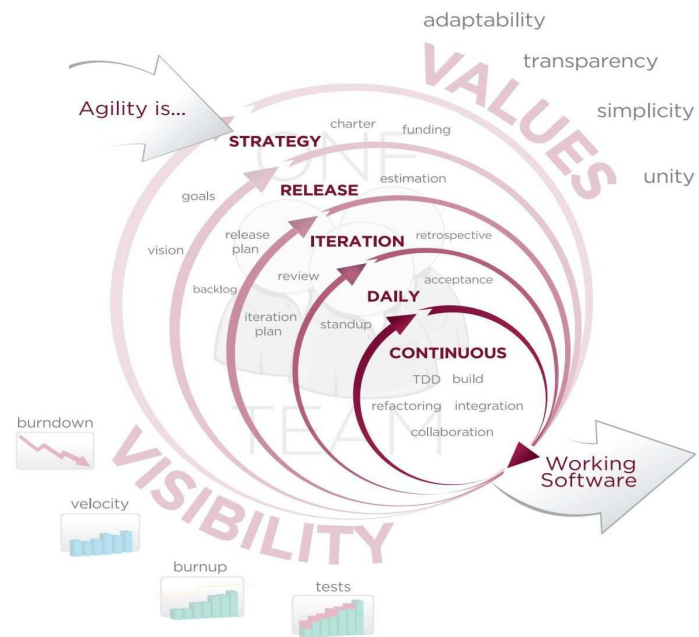

Also our key developers have good experience in software outsourcing development and have experience in the following areas and technologies:

- *product and catalog management (JSP, Java Servlets, JDBC, Hibernate, Struts, JavaScript, DHTML, MSSQL, Oracle)*
- *document management (JNI, JavaMail, Rhino)*
- *postage mail optimization (.NET, Java, Hibernate, JDBC, jBarcode, Legacy file formats processing, web services)*
- *resource management (GWT, Oracle, ExtJS)*

Workflow

We prefer to use Agile methodologies in software development because it gives fast user feedback, better control over the project goals and the possibility to correct project development strategies according to real situation on the market.

We thoroughly familiarize with the customer requirements, write user stories, make some mockups using great tools like Balsamiq Mockups. Then we do some estimation for mockups proposals and user stories. When it is enough for the version we start the development and testing. After small iteration we present a working version to the customer and make branch in version control system for delivery stabilization. During the development phase we discuss next version strategy and tasks with the customers. Every day we do scrum meetings and review our priorities.

Our Benefits

It's not been long time since our company came to the software outsourcing market, because we were focused on our own original product. Now we would like to expand the sphere of our activity, so we are looking for the customers and partners from abroad. Besides individual approach to each customer, high quality work of our professionals, our obvious benefit is low prices.

Contact Information

If you feel that we can help you with your business and ideas, feel free to contact us and ask any question. We are diligent, creative and possess all the necessary knowledge to make Your ideas come true.
